# How to Install Wi-Fi Modules
Perform the following steps to install the Wi-Fi Module on the NT+ Series.

Step 1: Remove the Wi-fi module cover by unscrewing the two screws securing the cover to the panel. The Wi-Fi module cover and screws should be saved if the panel will be transported in its original packaging in the future.

Step 2: Insert the Wi-Fi module into the open port on the rear of the panel until it is firmly seated.
Note: Insert the Wi-Fi module with the black fins facing outward towards the wall.

Step 3: Use the new M3*6 screws provided with the Wi-Fi module to secure it to the panel.
Note: Do not over tighten screws.

⚠ **Caution**
The Wi-Fi Module does not support hot plugging. Therefore, you must insert or remove the Wi-Fi Module when the display is powered off. Otherwise, the displays or Wi-Fi Module may be damaged.
